IN THE CLAIMS:

The status of the claims is as follows:

1. (Previously Presented) For use over a global communications network having

company nodes and constituency nodes associated therewith, an electronic commerce system

comprising:

a data repository that is operable to store data files associated with said company nodes,

wherein said company nodes populate respective associated data files with company information,

wherein each set of said company information relates to a specific company that is represented

by a specific company node, wherein at least one company node is operable to modify said

company information that is stored in said data files and is operable to control when selected

portions of company information in said data files are made available to said constituency nodes;

and

a communications controller that is operable to (i) propagate communication interfaces

accessible by said constituency nodes with selected portions of said company information under

control of said company nodes in a manner that ensures compliance with one or more

governmental disclosure requirements applicable to the companies associated with the company

nodes, and (ii) gather feedback information representative of constituency response to said

constituency nodes accessing said communication interfaces.

ATTORNEY DOCKET No.: OFFW01-00008

UNITED STATES SERIAL NO.: 09/694,425

2. (Original) The electronic commerce system for use over a global communications

network recited in Claim 1 wherein said communications controller is further operable to process

said gathered feedback information and, in response thereto, modify ones of said data files.

3. (Previously Presented) The electronic commerce system for use over a global

communications network recited in Claim 1 wherein said communications controller is further

operable to analyze said gathered feedback information and ones of said data files and, in response

thereto, to report results thereof to said at least one company node.

4. (Original) The electronic commerce system for use over a global communications

network recited in Claim 1 wherein said communications controller, while gathering said feedback

information, employs mathematical representations to represent at least one of constituency

understanding and constituency reaction.

5. (Previously Presented) The electronic commerce system for use over a global

communications network recited in Claim 1 further comprising a security controller that is operable,

with respect to those data files associated with said company node, to limit access to said those data

files to designated personnel of said company of said at least one company node.

-3-

ATTORNEY DOCKET No.: OFFW01-00008

UNITED STATES SERIAL No.: 09/694,425

PATENT

6. (Original) The electronic commerce system for use over a global communications

network recited in Claim 5 wherein said security controller includes an interactive voice recognition

controller that is operable to verify the identity of said designated personnel.

7. (Previously Presented) The electronic commerce system for use over a global

communications network recited in Claim 1 wherein said communications controller is further

operable to translate said selected portions of said company information from a first language into

a second language.

8. (Previously Presented) The electronic commerce system for use over a global

communications network recited in Claim 1 wherein said communications controller is further

operable to store, index and relate associated portions of said company information in the data

repository.

9. (Previously Presented) The electronic commerce system for use over a global

communications network recited in Claim 1 wherein said communications controller is further

operable to organize said selected portions of said company information that propagate said

communication interfaces into channels accessible by said constituency nodes.

-4-

ATTORNEY DOCKET No.: OFFW01-00008

UNITED STATES SERIAL NO.: 09/694,425

PATENT

10. (Original) The electronic commerce system for use over a global communications

network recited in Claim 9 wherein said channels include at least two of an overview channel, an

outlook channel, a community consensus channel, a community forecast channel, a research channel,

an online q&a channel, an online conference channel, a financial history channel and a newsroom

channel.

11. (Previously Presented) For use over a global communications network

having company nodes and constituency nodes associated therewith, a method of operating an

electronic commerce system having a data repository and a communications controller, said

method of operation comprising:

storing data files associated with said company nodes in said data repository, wherein

said company nodes populate respective associated data files with company information wherein

each set of said company information relates to a specific company that is represented by a

specific company node;

modifying using at least one company node said company information that is stored in

said data files:

controlling using said at least one company node when selected portions of company

information in said data files are made available to said constituency nodes;

propagating communication interfaces accessible by said constituency nodes with

selected portions of said company information using said communications controller under

control of said company nodes in a manner that ensures compliance with one or more

governmental disclosure requirements applicable to the companies associated with the company

nodes: and

gathering feedback information with said communications controller, said feedback

information representative of constituency response to said constituency nodes accessing said

communication interfaces.

ATTORNEY DOCKET No.: OFFW01-00008
UNITED STATES SERIAL No.: 09/694,425

RIAL NO., 05/054,423

12. (Original) The method of operating the electronic commerce system for use

over a global communications network recited in Claim 11 further comprising the steps of

processing said gathered feedback information and, in response thereto, modifying ones of said

data files.

13. (Previously Presented) The method of operating the electronic commerce

system for use over a global communications network recited in Claim 11 further comprising the

steps of analyzing said gathered feedback information and ones of said data files and, in response

thereto, reporting results thereof to said at least one company node.

14. (Original) The method of operating the electronic commerce system for use

over a global communications network recited in Claim 11 further comprising the step of, while

gathering said feedback information, employing mathematical representations to represent at

least one of constituency understanding and constituency reaction.

15. (Previously Presented) The method of operating the electronic commerce

system for use over a global communications network recited in Claim 11 further comprising the

step of limiting, with respect to those data files associated with said company node, access to

said those data files to designated personnel of said company of said at least one company node.

-7-

ATTORNEY DOCKET No.: OFFW01-00008 United States Serial No.: 09/694,425

DATENT

16. (Original) The method of operating the electronic commerce system for use

over a global communications network recited in Claim 15 wherein said limiting access step

further comprises the step of using an interactive voice recognition controller to verify the

identity of said designated personnel.

17. (Previously Presented) The method of operating the electronic commerce

system for use over a global communications network recited in Claim 11 further comprising the

step of translating said selected portions of said company information from a first language into a

second language.

18. (Previously Presented) The method of operating the electronic commerce

system for use over a global communications network recited in Claim 11 further comprising the

steps of storing, indexing and relating associated portions of said company information in the

data repository.

19. (Previously Presented) The method of operating the electronic commerce

system for use over a global communications network recited in Claim 11 further comprising the

step of organizing said selected portions of said company information that propagate said

communication interfaces into channels accessible by said constituency nodes.

-8-

20. (Previously Presented) For use over a global communications network

having company nodes and constituency nodes associated therewith, an electronic commerce

system comprising:

a data repository that is operable to store data files associated with said company nodes,

wherein said company nodes populate respective associated data files with company information

wherein each set of said company information relates to a specific company that is represented

by a specific company node; wherein at least one company node is operable to modify said

company information that is stored in said data files and is operable to control when selected

portions of company information in said data files are made available to said constituency nodes;

and

a communications controller that is operable to:

propagate communication interfaces accessible by said constituency nodes with selected

portions of said company information under control of said company nodes in a manner that ensures

compliance with one or more governmental disclosure requirements applicable to the companies

associated with the company nodes,

gather feedback information representative of constituency response to said constituency

nodes accessing said communication interfaces,

process and analyze said gathered feedback information and, in response thereto, to at

least one of modify ones of said data files and report results thereof to said company node, and

-9-

UNITED STATES SERIAL NO.: 09/694,425

limit access, with respect to those data files associated with said company node, to

designated personnel of said company of said at least one company node.

The electronic commerce system recited in Claim 1, 21. (Previously Presented)

wherein the communications controller is operable to ensure compliance with the one or more

governmental disclosure requirements by fully disseminating the selected portions of the

company information to the constituency nodes in compliance with the one or more

governmental disclosure requirements.

22. (Previously Presented) The electronic commerce system recited in Claim 1,

wherein the communications controller is operable to control when the selected portions of

company information are made available to the constituency nodes by:

allowing multiple versions of a single data file to be stored in the data repository; and

refraining from propagating the company information in the data file to the constituency

nodes until one of the company nodes indicates that a specific version of the data file is ready for

distribution.
